(a) Same observations; different cheapest certificates

Shared prefix b = (2, 3, 1): six paid records

	Record 1	Record 2	Record 3
A	(3/8, 7/8)	(3/8, 7/8)	unread
L	(0, 1)	(0, 1)	(0, 7/8)
R	(7/8, 0)	unread	unread

Two compatible archives (hidden from the policy)

World	A record 3	R records 2, 3	Minimum b
I	(0, 0)	(5/8, 0), (3/8, 0)	(2, 3, 3)
II	(0, 1)	(5/8, 0), (1, 1)	(3, 3, 1)

(b) Buying the wrong tail adds avoidable observations

Next acquisition route	World I	World II
Candidate tail first	9	7
Right tail first (records 2 and 3)	8	9
Cheapest realised prefix C*	**8**	**7**

Mix the two routes with probabilities 16/23 and 7/23

Expected cost / C* = 25/23 in both worlds

All costs count whole records. World labels are retrospective.
