$N = 5$, $d = 1$
71/67 randomised
15/14 deterministic
Ratio 1: $d(N-1) \le 2$
Exact two-terminal regime: $2 < d(N-1) \le 3$
Remaining regime: bounds; exact value open in general
B General catalogue ($K \ge 3$)
Band width d
General lower and upper bounds
Rows per configuration N (integer)
Hatched region: exact formula for $0 < dN \le 1$
$d = 0$ is excluded: no positive archives.
